

Startmicrophone SM8 Speech Amplifier SV4-SM Headset HS2-X

The Startmicrophone SM8 is used for all sports that are started with a start gun (e.g. athletics, triathlon, cycling, swimming, speed skating, short track, cross country).

The start shot of the gun triggers an electric impulse in the Startmicrophone. This electric impulse triggers the timing device. The Startmicrophone can be screwed onto the start gun.

If you connect the Startmicrophone with the speech amplifier SV4/SM, a voice communication is possible with the headsets HS2-2 or HS2-1. For this voice communication you use the same two-wire cable as for the start impulse.

Headset HS2-2
for outdoor use
with noise protection

Speech Amplifier SV4/SM

Headset HS2-1
for indoor use
with one free ear
